

## Lower Operational Costs & Increase Patient Satisfaction

### Legacy CRT Replacement Flat Panel Displays Sized to Your Needs

#### Announcing The Healthcare Compliant CRT Replacement Program

With CRT's rapidly reaching their normal end of life supply cycle, many hospitals and healthcare facilities are looking to replace their aging inventories of in-room CRT's with current LCD technology. Paradigm has integrated a client friendly turn-key solution for facilities seeking the latest in compliant flat panel displays with complete freedom to select display sizes.

#### **Benefits of the LCD Display Upgrade include:**

- ◆ Complete interface to current nurse call systems manufacturers & Pillow Speakers
- ◆ Space friendly CATV tuner supports 125 channel NTSC TV signal plus auto-search and programming
- ◆ Longer display life
- ◆ Reduction of energy usage - more than 50% (35W vs 75W on average)
- ◆ Slim design, very small footprint greatly improves room appearances and adds placement options
- ◆ Reduced Weight, LCDs are about 25% the weight of the same size CRT screen
- ◆ Full line of display sizes - Choice of display size and ability to brand unit including splash screens

You can place any size monitor in a hospital room, from 15" to 42" LCD units, and everything in between. The way we are able to do this is through a uniquely designed Tuner Interface Box (HT22). This tuner, integrated with hospital protocol, uses a standard Pillow Speaker. Consequently, any LCD monitor with an AV port can potentially be installed into a hospital room with its TV functions controlled via the pillow speaker using our TV tuner box.

Many of our smaller LCDs (15"-19") come with a patented optical glass overlay not seen on any other unit in the hospital market. This unique feature allows, among other things, the ability to clean and disinfect the monitor without damaging the LCD panel. No other hospital LCDTV can make that claim.

With the Paradigm Multimedia solution, a hospital or long-term healthcare facility can be offered various types, styles and sizes, all in compliance with IEC 60601-1. The competition offers limitations. **Paradigm offers CHOICE!**
